

Unique Stays Curator

A private investor controls the capital. He wants one answer: where does it work hardest?

ANALYSTS

Angélica Roa · Kseniia Lukhlina · Lara Caçador

THE BRIEF

“

I have the capital. I don't have time to guess. Show me exactly where a short-term rental makes the most money — and why.

— Our client, a private real-estate investor

Three questions, one recommendation.

01

Which property type deserves the investment?

02

Which market can back that up with real numbers?

03

Where should he look next?

Before the Numbers: Cleaning the Raw Data

Step 1 — *nulls, duplicates, and untangling the title field*

01 Checked nulls & duplicates

Flagged missing ratings and prices; dropped exact duplicate rows before anything else.

02 Extracted location from the title

Source rows like “Chalet in Skykomish” were split into structured type + location fields.

WHAT THAT LOOKED LIKE

Raw title	Property Type	Location
Chalet in Skykomish	Chalet	Skykomish
Guesthouse in Key Largo	Guesthouse	Key Largo
Home in Blue Ridge	Home	Blue Ridge

Before the Numbers: Mapping the Data

Step 2 — matching states to countries, then plotting listings geographically

108

CLEAN, MAPPED U.S. LOCATIONS

03 Filled in missing countries

Matched U.S. states to “US” where country was blank in the source data.

04 Started geo-mapping the listings

An early exploration into visualizing listings on a map — picked back up as a Phase 2 tool later in this deck.

This is the foundation everything else in this pitch stands on.

Before the Numbers: Coordinates, Ready to Plot

Step 3 — turning locations into mappable coordinates

Location	State	Country	Latitude	Longitude
Skykomish	Washington	US	47.709272	-121.360568
Hancock	New York	US	41.954223	-75.280540
West Farmington	Ohio	US	41.390499	-80.973621
Blue Ridge	Georgia	US	34.863972	-84.324087

Base map render

Real coordinates, computed for all 108 U.S. locations — the foundation for plotting exact pins in a future version of this tool.

Where Should Your First Dollar Go?

Niche property types outperform saturated mainstream listings

NICHE — UNDER-SUPPLIED

Guesthouse

4.92★ · 22 listings · 412 avg. reviews

High demand, low supply — proven, room to grow.

SATURATED — MAINSTREAM

Apartment

4.77★ · 105 listings · 208 avg. reviews

► Invest where demand already outpaces supply.

The Full Picture, Before Narrowing Down

Every listing across U.S. cities, before any reliability filtering

	PRICE (\$)	RATING	ANSWERS
count	953.00	953.00	953.00
mean	171.36	4.75	187.92
std	141.66	0.74	185.39
min	16.00	0.00	0.00
25%	83.00	4.81	53.00
50%	135.00	4.89	136.00
75%	221.00	4.96	266.00
max	1463.00	5.00	1239.00

TOP CITIES BY AVERAGE PRICE

City	Price	Rating	Answers	Listing (n)
★ Malibu	\$464.67	4.84	550.0	6
Oceanside	\$341.50	4.95	138.5	2
Vero Beach	\$289.50	4.94	216.0	2
Marion	\$257.00	5.00	19.5	2
Miami	\$248.33	4.89	286.0	3

→ Malibu leads on price and is the only city here with enough listings (n=6) to trust the number — an early signal the next slides confirm from two independent angles.

Do Price, Rating and Demand Move Together?

A quick correlation check before committing to specific cities

PRICE ↔ RATING

0.03

no relationship

PRICE ↔ DEMAND

-0.15

weak, negative

RATING ↔ DEMAND

0.30

the strongest link — still moderate

Takeaway. This doesn't mean price is unimportant to our investor — it means price alone can't tell you which listings are worth it. That's exactly the gap the rest of this pitch closes.

Where Prices Run Highest Across the Board

Malibu tops the list — even before applying a reliability filter

Next: applying a ≥5-listing reliability filter to confirm which of these numbers we can actually trust.

Where the Data Say Bet, Now

A reliability filter narrows the U.S. market to one clear leader

Methodology. Requiring at least 5 listings per city filters out one-off outliers. Only two U.S. cities clear that bar — Malibu and Miami Beach.

\$110,621

AVG. ANNUAL REVENUE PER LISTING

+14.5%

REVENUE GROWTH, YoY

“

Only ~130 hotel rooms service Malibu's 21-mile coastline.

— CA Coastal Commission, Staff Report F10a, 2022

Scarce hotel supply pushes real, government-documented demand toward short-term rentals — not a fad, a structural gap in the market.

What's Next: 21 Hidden Gems Still Flying Under the Radar

Proven quality, virtually undiscovered — early evidence for a future international expansion

ROOM

Kecamatan Ubud, Indonesia

\$29/night

5.0★ · 9 reviews

APARTMENT

Kadıköy, Turkey

\$34/night

5.0★ · 3 reviews

CONDO

Roviano, Italy

\$61/night

5.0★ · 8 reviews

Price barely tracks quality in this market ($r = 0.17$). These listings are underpriced by oversight, not by merit — exactly the gap a marketing push can close before the market catches on.

These are early candidates for a future Phase 2 expansion — once Phase 1 in the U.S. proves out.

■ PHASE 2 — INTERNATIONAL EXPANSION

THE RECOMMENDATION

Three phases. One clear place to start.

01 Invest in under-supplied niches

Guesthouse, Dome, Guest suite — proven demand, room to grow.

02 Go to Malibu, now

The only U.S. market where the numbers hold up — \$110,621/yr, +14.5% growth, backed by an official state report.

03 Watch the 21 hidden gems

Early signal for a Phase 2 international expansion, once Malibu proves out.

LOOKING AHEAD

As Angelica showed us earlier, mapping listings geographically is a natural next step — to visualize where Phase 2 opportunities cluster.

Thank you.
